Assignment No.: 2

Create appropriate Power BI visualizations to identify key business patterns.

Problem Statement

Management wants to quickly understand sales performance across products, categories, and regions. Create appropriate Power BI visualizations to identify key business patterns.

Methodology / Steps Followed

Step 1: Data Collection

- Obtained the Business dataset from CSV file.
- Used the **Sample Superstore** dataset for sales analysis.

Step 2: Data Import

- Opened Power BI Desktop.
- Imported the CSV dataset using the **Get Data** option.

Step 3: Data Preparation

- Checked the available columns and verified the data types.
- Converted the **Order Date** column to the appropriate date format for analysis.

Step 4: Dashboard Development

- Created KPI cards for **Total Sales, Total Profit, and Total Quantity Sold.**
- Developed visualizations for **Sales by Category, Region, Sub-Category, and Segment.**
- Created a **Monthly Sales Trend and Profit by Category** visualization.

Output

The final Power BI dashboard provides:

- Total Sales Performance
- Total Profit Analysis
- Total Quantity Sold Analysis
- Sales by Category Analysis
- Monthly Sales Trend Analysis
- Sales by Sub-Category Analysis
- Sales by Region Analysis
- Interactive Dashboard Visuals

The dashboard enables users to analyze sales performance across different categories, sub-categories, regions, and time periods, helping identify key business patterns and support data-driven decision-making.

Conclusion

This project successfully integrated the Superstore sales data into Power BI for effective business analysis. The data was organized and used to create meaningful visualizations and key performance indicators. The dashboard was developed to analyze total sales, profit, quantity sold, categories, sub-categories, regions, and monthly sales trends. The final dashboard provides a clear and simple view of sales performance, helping users identify important business patterns and support better data-driven decision-making.

Learning Outcomes

Through this project, I learned:

- How to import data from CSV files into Power BI.
- How to use the Superstore sales data for analysis and dashboard development.
- How to work with different data fields such as Sales, Profit, Quantity, Category, and Region.
- Creating KPI cards for Total Sales, Total Profit, and Total Quantity Sold.
- Creating different visualizations to analyze sales by category, sub-category, region, and month.
- Designing a Power BI dashboard using different charts and visualizations.
- Analyzing sales performance and identifying meaningful business patterns from the available data.
